

Custom Spiral

Custom spirals can be made from any of standard material and tubing sizes. We can create complete assemblies with fittings, couplers and covers, plugs, and Free Angle® swivel fittings. Internal lube lines and external capillary lines are also available specifically for air tool applications. ATP has recommended tooling available for each size tubing available to allow for maximum performance. Custom spiraling can be performed on various tooling sizes per your requirements allowing for various coil ID's and OD's.

Please contact an ATP representative whenever your application requires components beyond our standards set forth in this catalog. Often even the most complex applications can be met through our custom options.

Dimensions are calculated by a mathematical formula. Actual dimensions may vary slightly. If a certain dimension is critical to your specific application, please advise us at the time of quotation so we may calculate correctly.

We will make every effort to ensure the specifications of the spiral you order are accurate prior to production. However, due to their very special nature, custom spiral orders may not be cancelled once production begins. Custom spirals are only eligible for return in the event of an error on the part of ATP.

There are **5** items necessary for an accurate quote on your custom spiral:

- 1) **I.D. and O.D. of tubing**
- 2) **Either total length or working length**
- 3) **Tail lengths**
- 4) **Fitting requirements**
- 5) **Tubing material**

Copy This Form & Fax It

In order for us to quote you properly, simply make a copy of this form, fill in your specifications and fax it to **937-349-4155**. A drawing will be issued for your approval before production begins. Due to the very special nature of this product, no cancellations can be accepted once production begins.
